Title
(EN) ENCAPSULATED READING DEVICE
(FR) DISPOSITIF DE LECTURE ENCAPSULE

Abstract: **(EN)** Embodiments of the present invention are directed to an encapsulated reading apparatus that includes a main body portion; a rotatable end removeably attached to a first end of the main body portion; and a fixed end attached to a second end of the main body portion. The encapsulated reading apparatus may also include a page mechanism including a plurality of turn-able pages disposed in and coaxially aligned with the main body portion, the page mechanism being connected to and between the rotatable end and the fixed end, and the plurality of turn-able pages being visible through a portion of the main body portion. The rotatable end may be operated to turn the page mechanism in a forward direction and a backward direction to display each of the plurality of turn-able pages.

(FR) La présente invention concerne un appareil de lecture encapsulé. Il comprend un corps principal, une extrémité rotative montée amovible à une première extrémité du corps principal, et une extrémité fixe solidaire de l'autre extrémité du corps principal. Ce dispositif peut également comporter un mécanisme de changement de pages rassemblant une pluralité de pages à tourner en alignement coaxial avec le corps principal. Le mécanisme de changement de pages est monté entre l'extrémité rotative et l'extrémité fixe. Les différentes pages à tourner sont visibles au travers d'une partie du corps principal. L'extrémité rotative permet de faire tourner le mécanisme de changement de pages en avant et en arrière pour faire apparaître chacune des multiples pages à tourner.
